

Axis triple on S^2
 $\det = +0.516 > 0 \Rightarrow +\pi$ branch

Phase accumulation:
 $\delta = (\pi + \phi(\text{aaB}) + \phi(\text{baa})) \bmod 360$

- $\phi(\text{aaB}) = -176.7$ deg
- $\phi(\text{baa}) = -167.4$ deg
- $+\pi$
- $\delta_{\text{HFG}} = 195.91$ deg
- $\text{PDG } \delta = 197.0$ deg
